

Welcome to the master programme:

Product Development and Materials Engineering

Hi

I am delighted that you are going to study in our master programme “Product Development and Materials Engineering” at the University of Jönköping. The University campus sits in a beautiful lake side location in the centre of the town of Jönköping. In the programme, you will advance your knowledge in innovation, materials, and engineering analyses and at the same time get hands on experience on realising and improving products often working with actual products at nearby companies. In the programme, collaboration skills are promoted and a lot of time will be devoted to group assignments.

On Monday 21st of August there is a roll call. Your name is called out so that we can verify that you are present. By answering the call, you claim your position in the programme. At this time, you will also meet the dean, the head of education, the programme managers and some of the teachers. It is very important that you are present at the roll call. Should you for some reason be unable to attend as for example if you have not obtained your visa, you must notify me by sending e-mail, phone call or SMS to my address below and tell me the reason and when you expect to arrive. If you arrive after the 4th of September you will not be allowed to start. Your semester fee will then be reimbursed.

After the roll call, you are invited to lunch at a nearby restaurant. It is a Greek place and it was chosen because it is the only restaurant in town large enough to receive all first-year engineering master students at the same time (<http://pallasatena.com/pallasatena/>) After lunch we will get back to campus for more information about your studies.

See you in Jönköping!

Roland Stolt, PhD

Programme manager
