

## COURSE SYLLABUS

### Basic FEM-analys, 7.5 credits

*Grundläggande FEM-analys, 7,5 högskolepoäng*

---

<b>Course Code:</b> TGFK10	<b>Education Cycle:</b> First-cycle level
<b>Confirmed by:</b> Dean Jun 1, 2019	<b>Disciplinary domain:</b> Technology
<b>Valid From:</b> Jan 1, 2020	<b>Subject group:</b> MT1
<b>Version:</b> 1	<b>Specialised in:</b> GIF
	<b>Main field of study:</b> Mechanical Engineering

---

### Intended Learning Outcomes (ILO)

After completion of the course the student should:

Knowledge and understanding

- demonstrate comprehension of the basic principals of the finite element method
- display knowledge of the various types of finite elements and material models and their usefulness and suitability in different situations.

Skills and abilities

- demonstrate skills to idealize, implement and solve realistic engineering problems in a commercial FE-software and interpret the results
- demonstrate the ability to explain the workflow of FE analysis.

Judgement and approach

- demonstrate the ability to assess and estimate the agreement between a theoretical model and a real load-case
- demonstrate the ability to assess the plausibility of a simulation result.

### Contents

The aim of the course is to combine theory and application regarding FE-analysis.

The course includes the following elements;

- Deriving the equations for elasticity, force equilibrium, geometric relations, material relations, principal stress.
- Theory on differential equations and methods of discretization.
- Idealization, choice of models, loads, boundary conditions, simplifications, meshing, solution strategies, visualization of results and post-processing.
- Analysis with commercial software packages, heat problems, solid mechanics, contact, large deformations, plasticity, material models, frequency analysis, buckling and dynamic loading.

### Type of instruction

Lectures and computer exercises including hand in assignments.

The teaching is conducted in English.

### Prerequisites

General entry requirements and completed courses in Multivariable Calculus, 7.5hp and Solid Mechanics, 6hp (or the equivalent).

### Examination and grades

The course is graded 5,4,3 or Fail.

Registration of examination:

Name of the Test	Value	Grading
Examination <sup>1</sup>	4 credits	5/4/3/U
Assignment	3.5 credits	U/G

<sup>1</sup> Determines the final grade of the course, which is issued only when all course units have been passed.

### Course literature

Titel: Engineering Analysis with SolidWorks Simulation 2014

Författare: P. Kurowski

Förlag: SDC Publications

ISBN: 9781585038589

Compendium PDF and videos

Video-tutorials

Referencelitterature:

Title: Concepts and Applications of Finite Element Analysis

Author: R.D. Cook, D.S. Malkus, M.E. Plesha, R.J. Witt

ISBN: 9780471356059

The literature is set one month before the course starts

Compendium in electronic form

Matlab-tutorials

The literature is preliminary until one month before the course starts.
