Is your Safe Exam Browser Up-To-Date?

 **Jens Andreas Pettersen**
 Last modified Aug 06, 2018 by Linn Therese Lie

Safe Exam Browser prevents cheating by locking down access to resources on your computer as well as online resources for the duration of the examination.

Download and install Safe Exam Browser*

For Windows 7, 8 or 10.

For Mac OSX (10.10 or higher)

*Download the newest version of SEB supported by Inspera Assessment. Click [here](#) for a full list of system requirements.

Note, your institution may require a different version of SEB. Contact your institution for further information.

3. Go to the “Downloads” directory in Finder, you will also find a shortcut to your right in the activity bar (se picture below). This will show you the latest downloaded files

4. Click on the Safe Exam Browser-icon, (in this case the file’s name is **SafeExamBrowser-2.1.2.dmg**). This will start the installation on your Mac
5. Once the file has unzipped itself, you need to drag and drop the icon to the blue Applications folder. The installed process is now finished. If problems arise, please go to ju.se/student/en/digital-exam/faq.html for help
