PROGRAMME SYLLABUS

Master of Science with a major in Occupational Therapy, 60 credits

Valid From: 2012-08-27

PROGRAMME SYLLABUS

Master of Science with a major in Occupational Therapy, 60 credits

Magisterprogram i arbetsterapi, 60 högskolepoäng

Programme code:HAOCC

Valid From.: 2012-08-27

Confirmed by: President 2011-11-16

Education Cycle: Advanced level

Version: 1

Title of qualification

Master of Science (60 Credits) with a major in Occupational Therapy

Programme overview

Scope

The educational programme addresses students who want to achieve a Master's degree in Occupational Therapy. The programme is organised at advanced level and comprises 60 Credits. One year of full time study consisting of 40 weeks will earn 60 Credits, whereby 1,5 Credits correspond on average to one week's studies of at least 40 hours.

The programme is designed to ensure that the participants expand their key skills in relation to their discipline and professional development during their studies. Graduates from this program will achieve theoretical knowledge in order to provide best practice based on evidence.

Objectives

General objectives

According to the Swedish Higher Education Act (SFS 1992:1434 revised 2006:173 1 Ch. 9 §) the education at advanced level shall be based on the knowledge, skills and abilities acquired by the students from the education at basic level or equivalent knowledge.

The education at advanced level shall involve in-depth knowledge, skills and abilities in relation to education in addition to that applying at the basic level, and

- further develop the students' ability to think critically and to independently integrate and use knowledge
- develop the students' ability to manage complex occurrences, issues and situations, and
- develop the students' qualifications for professional activities which demand considerable independence or for research and development work.

Qualitative objectives

Aims stated in the Swedish Higher Education Act (SFS 1992:1434 revised 2006:173 1 Ch. 8 §) declare that the student who has completed the study program leading to a Master of Science in accordance with the Degree Ordinance (appendix 2, Higher Education Ordinance SFS 1993:100, revised 1998:1003)

should have:

Knowledge and understanding in order to

- demonstrate a broad command in their main field of study and deeper knowledge of certain parts of the field, together with insight into current research and development work
- demonstrate deeper methodological knowledge in their main field of study.

Skills and ability in order to

- critically and systematically integrate knowledge of theory and evidence in order to analyze, assess and deal with complex phenomena, issues and situations in their main field
- independently identify and formulate issues in their main field and plan, using appropriate methods and carry out advanced tasks within specified time limits
- discuss and argue for theory and evidence, both orally and in writing, in national as well as international contexts
- participate in research and development work.

Judgement and approach

- make assessments in their main field of study, taking into account relevant scientific, social and ethical aspects, and demonstrate an awareness of ethical aspects of research and development work
- demonstrate insight into the potential and limitations of science, its role in society and people's responsibility for how it is used
- identify their need of further knowledge and to take responsibility for developing their knowledge
- to have a commitment to disseminate research findings and engage in dialogue with wider research community.

Independent project

For a Degree of Master (60 Credits) students must have completed an independent project (thesis) worth at least 15 Credits in their main field of study, within the framework of the course requirements.

Contents

Programme structure

The programme is split into modules (see below). The first module is a research-methodology module followed by in-depth studies in the main subject.

At the end of the programme students must complete an independent project (Thesis) worth at least 15 Credits. This final project should be performed individually or in pairs. If students work together, each student's work should meet the demands on an individual project. A Master of Science (60 Credits) is obtained after the student has successfully completed course requirements in the main field of their studies.

Courses for students in Occupational Therapy Science

Research methodology, 15 Credits

Evidence based practice, 7,5 Credits

Theoretical perspectives in health and welfare, 7,5 Credits

The meaning of occupation to health, 7,5 Credits

Occupational therapy, community based practice, 7,5 Credits

Occupational Therapy, Thesis, 15 Credits

Teaching and examination

The modules are distributed via internet and the web-platform Ping-pong. Internet access with a bandwidth sufficient for watching streaming video is required (recommended minimum download speed 1 Mbps). The programme is conducted and examined in English. Swedish-speaking students will be allowed to hand in their examinations in Swedish.

The modules are assessed separately using a range of assessment methods including research critique, literature review, written reports, essays and assignments. In a single course one of these methods, or a combination of them, may be used. Examinations may be carried out individually or in pair. Detailed rules for examination is described in each course syllabus.

Those who have passed an exam are not allowed to retake it.

Prerequisites

The education emanates from a Bachelor of Science in Occupational Therapy (180 Credits) including an independent project worth at least 15 Credits in Occupational Therapy.

Specific admission requirements

English language requirements

For this programme, where English is the language of instruction, the English language entry requirement is the equivalent of English studies at upper secondary level (post-16) in Sweden called English B. If your secondary school qualification in English does not meet these requirements, you must submit the official results of an internationally recognized test or examination. See: UniversityAdmission.se

Credit Transfer

Crediting of Courses

A student who has completed part of higher education, with pass grades, at another Swedish or foreign college/university, or obtained equivalent knowledge and skills in another way can, after undergoing a test, have this credited to his or her educational programme at the School of Health Sciences. When the student has produced the necessary documentation, the Head of Department of the course in question will make the decision whether crediting can be granted. The student shall be notified in writing of the content of the decision.

Continuation Requirements

Specific requirement for continuing studies in the programme is described in each course syllabus.

Qualification Requirements

Qualification requirements

A Degree of Master (One Year) is obtained after the student has completed course requirements of 60 higher education credits with a certain area of specialization determined by each higher education institution itself, including at least 30 higher education credits with in-depth studies in the main field of study. In addition, the student must hold a Degree of Bachelor, a Degree of Bachelor of Arts or a professional degree worth at least 180 higher education credits or an equivalent foreign qualification, including an independent project worth at least 15 Credits.

Diploma supplement

All degree certificates issued by Swedish state universities and university colleges must be accompanied by a supplement entitled the Diploma Supplement (DS), which provides information on the contents

and scope of the courses that together comprise the degree awarded. The purpose of this Diploma Supplement is to facilitate recognition and approval of university qualifications across Europe, as well as in other parts of the world, both in the academic arena and in business life. The intention is to enable for people with university degrees to move between different countries for work or studies.

Examination/Course and programme Certificate

Request for an examination certificate is to be made on the relevant form (the form is available on the School's website) and should be sent to the Student services, at the University. Examination certificates will be issued after completion of an educational course on the condition that the examination results have been reported into the study documentation system. The Dean will issue the examination certificates.

If the examination certificate concerns education at more than one college/university, the certificate must be issued by that college/university at which the student has most recently passed an examination or completed his or her education, unless the institutions concerned in each individual case agree otherwise.

Request for a course certificate is to be made on the relevant form (the form is available on the School's website) and is to be sent to the Student service-department. Certificates will be issued on the condition that the examination results have been reported into the study documentation system. On the assignment of the School of Health Sciences, a representative of the Student Unit will issue the course certificate.

Other Information

Selection Criteria

Professional experience as a qualified occupational therapist.

Grades

All courses are graded according to the ECTS-grading scale, with A, B, C, D and E being pass grades. The grade FX is inadequate and requires more work, while F is fail. For each module a study guide is available for detailed instructions and supervision. For the Thesis-module a supervisor is assigned for each project.

Study Intermission and Resumption of Studies

A study intermission can only be applied for and approved with regard to an educational programme, not for a course. Study intermission is to be applied for by the student using the relevant form and is to be handed in to the Department of Rehabilitation. Study intermission may be granted for a maximum of two years. An extension may be granted if exceptional circumstances apply. The decision whether or not to approve a study intermission will be made by the Head of Department. The Head of Department must give the decision in writing and, in consultation with the student, plan the resumption of the studies. The studies are subsequently to be conducted according to the curriculum that applies at the time of resumption. The student should notify the Department of Rehabilitation when he or she wishes to resume studying. The decision regarding the resumption of studies is to be made by the Head of Department. The student is to be informed in writing of the decision.

Discontinuation of Studies

The request to discontinue a programme or course is to be handed in, on the relevant form, to the Department of Rehabilitation. Before a decision is made regarding discontinuation of studies, the student has the right to educational guidance. The decision regarding discontinuation of studies will be made by the Head of Department, who is also responsible for de-registration of the student from the course.
