

Digital peer support for children

The overall aim of the project is to develop systems for peer support between children in need of special support. The research project uses a participatory design where scientists work with children who represent the target group. Children have multiple roles in the process, as informants and design partners and testers. The project includes the development of methodology for interaction with children.

Project time span

2012 – 2016

Funding

Barncancerfonden
