

Health geography for children in Halmstad

The project aims to identify the geographic distribution of mental health of children based on different determinants and to deepen knowledge and understanding of children's perspectives on factors in their immediate surroundings in relation to mental health. The material analyzed consists of survey data collected in collaboration with Halmstad municipality and interviews with children identified in healthy areas, with a focus on factors such as what children are experiencing as important for mental health within the various geographical areas.

Project time span

2013 – 2017

Funding

Halmstad Kommun

Ljungbergska Stiftelsen

Länsförsäkringar Halland

Affecta AB
